TEXT:

... can minimize risk of violations and reduce potential penalties if violations are identified.a

A **compliance** program is most effective if it has an internal **audit** process as a **component**
. Internal audits can help a provider identify a variety of **compliance**-related potential problems, particularly those related to **physician** billing.

Planning the Internal **Audit** Process
Designing an effective internal **audit** process begins with a systematic identification of areas of **compliance**-related risk and an analysis of the risk involved. This analysis should focus on factors...

Title: Increasing the use of an existing **medical**

emergency team in a teaching hospital

Abstract: Cultural barriers in hospital ward **staff** may

limit the use of a **Medical**

Emergency Team (MET) service. In December 2000 the

role of the existing Code Blue team in our hospital was expanded to

incorporate **review** of patients

fulfilling commonly employed MET criteria. Between

January 2001 and June 2003, the average call rate was...

...P < 0.0001]).

Our findings suggest that increasing the use of an existing service

to **review** patients **fulfilling** MET

criteria requires repeated education and a periodic assessment of

site-specific obstacles to utilization.

Scientific Basis for Selection of Emergency

Medical Examination Gloves for Emergency Medical Technicians, Paramedics, Firefighters, and Emergency Department Personnel

...sensitized patients. These well-documented hazards of glove powders have caused a growing number of emergency medical technicians, paramedics, firefighters, and hospitals to abandon the use of powdered emergency medical examination gloves, using only powder-free gloves. Powder-free latex as well as non-latex gloves are now available to emergency medical technicians,

paramedics, firefighters, and emergency department personnel. The use of powder-free natural rubber latex-free gloves is especially important to emergency medical technicians, paramedics, firefighters, as well as emergency department personnel to avoid eliciting an allergic reaction in the latex sensitized patient. The majority of our emergency medical technicians, paramedics and firefighters are now wearing powder-free emergency medical examination gloves that comply with ...ultimate elongation and tensile strength. Two certification organizations have been identified who certify that the emergency medical examination gloves comply with the stringent NFPA design and performance requirements reviewed in the 2003 Edition. Recommendations are...

...Edition so that it contains more detailed information on the design and performance requirements for emergency medical examination gloves, allowing the purchasing agents of fire departments, ambulance services, and hospital emergency departments to select the best powder-free latex and non-latex emergency medical examination gloves for their healthcare workers.

Scientific Basis for the Selection of Emergency
Medical Examination Gloves for
Emergency Medical Technicians,
Paramedics, Firefighters, and Emergency Department
Personnel. An Update

ABSTRACT:

The use of powder-free natural rubber or latex-free emergency medical examination gloves is especially important to emergency medical technicians, paramedics, firefighters, and emergency department personnel to avoid eliciting an allergic reaction in the latex sensitized patient. The majority of our emergency medical technicians, paramedics, and firefighters are now wearing powder-free emergency medical examination gloves that comply with the stringent codes and standards established by the National Fire Protection Association (NFPA), while very few hospital emergency department personnel have been provided with NFPA-approved gloves. There are four well-defined goals of this report that will assist emergency medical services, fire departments, and hospitals in the selection and purchase of emergency medical examination gloves. First, we will review again the stringent regulations for emergency medical examination gloves that are outlined by the NFPA. This design and performance standard was devised by the NFPA to address protective clothing for emergency medical operations. The design and performance requirement of the emergency medical examination gloves were described in the NFPA 1999, Standard on Protective Clothing for Emergency Medical Operations, 1997 Edition. As of September 2003, the emergency medical examination glove must meet the new design and performance requirements of emergency medical examination gloves discussed in NFPA 1999, Standard on Protective Clothing for Emergency Medical Operations, 2003 Edition.
